

Why is a Value Assessment right for your Company?

Operational Assessments: A Critical Component to Supply Chain Optimization

The progression companies take to improve their supply chain operations can vary widely between organizations. The most successful supply chain organizations regularly seek and evaluate ways to improve their operations through technology and process improvements.

Benefits

Operational Assessments enable companies to leverage enVista's deep supply chain and LEAN expertise for two to three focused days within their organization. As a result, clients benefit from:

- Innovative supply chain strategies that align with corporate objectives
- Benchmarking current processes and systems
- Obtaining data and projected return on investment (ROI) for objective decision support
- Identifying new opportunities for waste reduction and cost savings
- And developing a supply chain roadmap to meet their business goals

Customizable

Rather than using a standard set of criteria for review, enVista's Value Assessment is specifically tailored to your processes. Our consultants listen to your business objectives and challenges, and use that information as the foundation for each assessment. enVista's supply chain professionals are located all across the country, giving us the flexibility to visit more than one facility at a time, depending on the scope of the project.

Significant ROI

enVista clients have recognized a return on investment of more than 10 times. These savings can be realized immediately or over the course of a year and beyond.

Short Term Project/Long Term Impact

The assessment is completed in two to three days, including a formal presentation to your management team that outlines our findings, recommended savings, and a reasonable time line to meet your required return on investment. These savings are continuous, enabling your company to realize savings year after year.

Added Insight

As a third party expert, enVista provides objective input, significant experience and LEAN process expertise to quickly assess your operations and determine opportunities for greater efficiencies and savings. After spending two to three days with a client onsite, enVista often uncovers previously unknown problems, and walks clients through their solution options.

Technology Expertise

enVista's management team is comprised of a dozen technology leaders with more than 200 years of industry experience. Our teams are intimately familiar with more than 20 leading Warehouse Management, Labor Management, Transportation Management, and Enterprise Resource Planning (ERP) solutions. Consequently, we understand how to evaluate, select and deploy them to our clients' greatest advantage.

Warehousing & Distribution Experience

From supplier management to returns processing, and all of the other myriad functions in your supply chain, enVista senior-level consultants bring decades of working knowledge of warehousing and distribution within your industry.

LEAN Supply Chain Experience

Our consultants are LEAN Certified, making enVista the best equipped and most qualified partner to help you reduce, contain and avoid operational waste. A LEAN approach is leveraged throughout the operational assessment.

A Proven Investment

enVista's Operational Assessment has proven time and again to deliver exceptional value, insight, and cost savings. With a ROI of 10 times or more, the Operational Assessment is an easy, sure-fire investment in your supply chain.
