

Reliable

Rest assured that your systems are well cared for. 24/7 isn't a tagline, it's our commitment.

Warehouse Control Systems

enMotion

Warehouse Control System (WCS) by enVista is a user friendly Material Handling Equipment control platform that provides superior service. Whether a package conveyor system, automatic zone routing, shipping sorter, load planning, multi-lane merge, unit sorter, or other system, enMotion ensures maximum uptime. In addition to physically controlling machinery, enMotion provides operational directions to support auxiliary warehouse tools like Pick-by-Voice, Pick-by-Light, RF data transition and Print & Apply through its data management functions. **enMotion** communicates directly with the Warehouse Management System (WMS) and is built to drive the process in your DC. **enMotion** operates in concert with the WMS to direct routing or shipping plans while constantly confirming and editing transactions.

- Single Contact Point for WMS
- Real-Time Data Collection
- Real-Time Query Solutions
- Real-Time Status and User Input
- Carton Tracking and Auditing
- Accountability
- Strong Platform for Customization

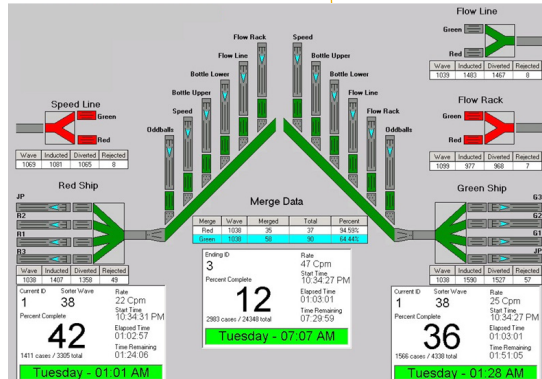

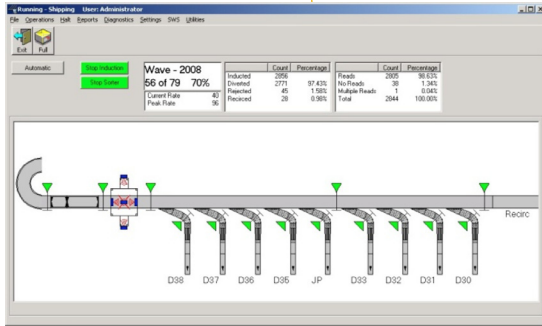

Configurable

enMotion is available as an out-of-the-box package or highly customized system to meet your specific needs. Our engineers perform rigorous processes to assure that your operations run smoothly from day one.

Our Process:

- Concept Development
- Software Functional Specification
